

IT 60 Washer

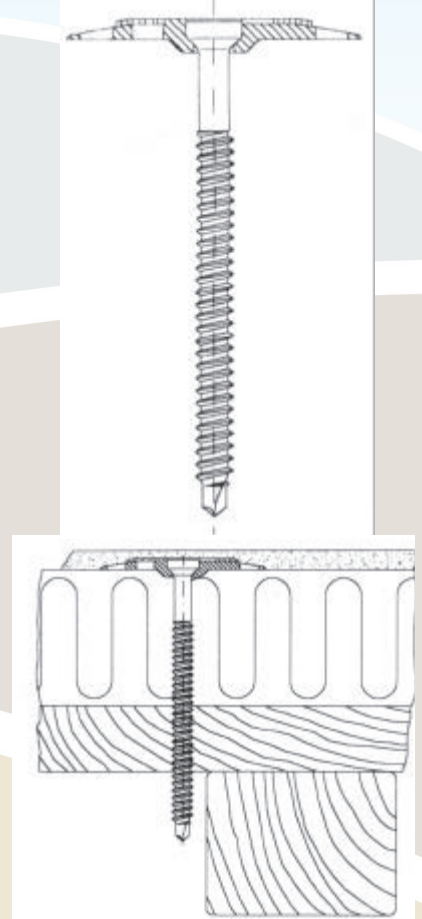

Material Specification

PA6 Glass Reinforced Polyamid

Application

For mechanical fixing or insulation material in conjunction with screws or anchors to a range of substrates including profiled metal, timber and masonry materials. In situation where direct flames will not be used in the laying of waterproofing layers over the insulation.

Typical Benefits Experienced through use of the IT 60

- Smooth underside to washer face will not damage insulation
- High resistance to pullover from screw or anchor
- Recessed hole gives minimum thermal bridge
- Corrosion resistant
- Profiled shape provides maximum strength of washer and allows waterproof layers to be applied over without difficulty

Information supplied should form part of a general guide and should performance data for a specific application be required please do not hesitate to contact us.
